

LOSSIRANTA HOTELS

SUSTAINABILITY

Environmental work is a part of Lossiranta hotels daily routines. Still we are developing ourselves into a more ecological company.

Food

Lossiranta hotels use local products, services and organic food when ever it is possible. In summertime part of the breakfast berries and plums and apples come straight from Lossiranta's organic garden. Our aim is to increase organic foods even more. We serve breakfast products ecologically from washable bowls and dishes, this way we can avoid using individually packaged products. We favour large packages in our purchases.

Sometimes after breakfast there is still water in carafes - we don't throw it away, we water the plants.

Other activity

You don't see small, non-ecological products in our bathrooms. We use environmentally friendly products when washing and cleaning. We also dry our laundry outside when ever it is possible. We don't use bleach. We change our light bulbs into environmentally friendly ones – energy saving lights. Lossiranta hotels' sustainability comes from small actions every day and it is a part of our corporate culture. We constantly work to find new sustainable solutions for the hotel business, in all areas.

Waste management

We sort all waste at the hotel. We also recycle all old electronic devices and others such as boards, bottles, metals, batteries and old furniture.

Take into consideration when travelling

Limit your energy consumption: switch off all unnecessary devices and lights when leaving the room.

Save water: don't use it unnecessarily, for example when soaping during shower.

We suggest you to drink tap water when ever it is possible. Finnish tap water is 100 % safe and also better than bottled water.

Use your towels more than once and tell your cleaning lady to skip your room if cleaning is not needed. Your hotel can save energy when changing towels and bed linen less frequently. Leave your towel on to the floor, if you want a new one.

Conserve area's versatile cultural and natural inheritance by acting economically.
